

IUSUP ABDULIAPAROV

C# / Unity Simulation Engineer | Medical Training, Real-Time 3D & Physics

Milan, Italy | Open to relocation | yusup.abdulyaparov@gmail.com | +39 351 443 2325

Portfolio: [kanopuster.github.io](https://github.com/kanopuster) | LinkedIn: [linkedin.com/in/iusup-abdulyaparov-85b30b30a](https://www.linkedin.com/in/iusup-abdulyaparov-85b30b30a)

PROFESSIONAL SUMMARY

C# / Unity simulation engineer building medical training software that connects real-time 3D graphics and physics to physical equipment. Since November 2025, working full-time in a two-engineer team on a commercial angiography trainer for a large international medical company. Earlier, co-founded Aviana, hired and led three programmers, and shipped Android and WebGL games on a shared architecture; products reached 9M+ users and 40k peak DAU. Based in Milan and open to relocation.

WORK EXPERIENCE

Confidential International MedTech Client

Nov 2025 - Present

C# / Unity Simulation Engineer | Contract, full-time

In-development commercial angiography training system for medical students and clinicians, built for a large international medical company. I work in a two-engineer team with equal responsibility across the whole simulator.

- Connected the Unity software to the physical training unit: device detection, real-time control data, calibration, and synchronized catheter and guidewire movement.
- Built diagnostic and treatment cases for coronary angiography, including stenosis navigation, balloon angioplasty, stent placement, and follow-up contrast imaging.
- Created X-ray-style graphics with contrast flow, DSA road-mapping, and breathing and heartbeat animation of the vessel model.
- Developed catheter, guidewire, balloon, and stent physics so tools react to bends, branches, vessel narrowing, and movement of the animated vessel wall.

Technology: Unity, C#, URP, ShaderLab/HLSL, Burst, Windows 10/11, hardware integration, procedural meshes.

Aviana Studios | WebGL and Mobile Products

Remote

Co-founder & Unity Engineering Lead

2023 - Apr 2026

Co-founded Aviana and led engineering for its mobile and WebGL portfolio, working with the producer/co-founder on product direction and delivery.

- Hired and led three programmers and coordinated development with the game designer and producer/co-founder.
- Worked across multiple released games: nine WebGL titles were shipped from the shared codebase, and one product reached 9M+ users and 40k peak DAU.
- Ported Android games to WebGL on a shared C# architecture covering input, UI, saves, services, and platform integrations.
- Reduced a WebGL build from 100 MB to 20 MB and improved low-end Android performance from approximately 15 FPS to a stable 60 FPS through profiling and asset optimization.

Technology: Unity, C#, URP, VContainer, R3, UniTask, Addressables, WebGL, Android.

Selected releases: [Mega Ramp Stunt](#) | [Zombie Check: Survival Shelter](#) | [Build Island](#)

TECHNICAL SKILLS

Core: C#, Unity, URP, ShaderLab/HLSL, Burst, WebGL, Android, Windows

Simulation: hardware input, calibration, contrast-flow simulation, catheter/guidewire physics, procedural vessels

Architecture: SOLID, dependency injection, state machines, ScriptableObjects, reactive UI, cross-platform codebases

Performance: Unity Profiler, Memory Profiler, GC reduction, pooling, batching, LODs, build-size optimization

EDUCATION & LANGUAGES

Universita Cattolica del Sacro Cuore | BSc Economics & Management

2024 - Present

Ufa State Petroleum Technical University | Automation & Control Systems Engineering

2022 - 2024

Languages: English, Russian
